

DCC

dynamic currency conversion

Dynamic Currency Conversion (DCC) is a service intended for users of MasterCard and Visa cards issued outside of the United Kingdom. The service is intended for users of foreign cards, and allows them to choose debiting in their domestic currency when withdrawing cash at NoteMachine ATM's

The user of a non-UK card decides whether the requested cash payment transaction should be done as a DCC transaction with a displayed exchange rate and the amount in his/her domestic currency, or as a transaction without conversion. If the user selects the option without conversion, debiting a non-UK card will be done in GBP.

The user of an non UK card, if s/he opts for DCC when withdrawing cash, immediately gets information on the amount of payment in GBP, exchange rate which will be used for conversion, fees, and the exact amount that his/her account will be debited for in domestic currency.

The DCC exchange rate according to which a DCC transaction is done is published exclusively on the NoteMachine ATM with the applicable percentage mark displayed.

NoteMachine exchange rate for DCC service (Dynamic Currency Conversion) is aligned with the ECB rate daily.
